

IGOT SIH — LOVABLE FRONTEND MASTER PROMPT

Copy the prompt below into Lovable to build the visual/UI foundation of the iGOT Karmayogi prototype.

1. PROJECT ROLE

Build a clean, professional, accessible web application UI for an **iGOT Karmayogi competency-driven learning platform**. The platform helps government learners assess competencies, identify skill gaps, receive personalized learning recommendations, access relevant iGOT learning resources, complete assessments, and track learning progress.

The website must feel like a **modern Indian government digital platform**, not a flashy SaaS or AI startup. Prioritize trust, clarity, accessibility, simplicity, professionalism, and ease of use.

2. DESIGN LANGUAGE

- Use a restrained, institutional and modern visual style.
- Avoid excessive gradients, glassmorphism, neon colours, oversized rounded cards, decorative blobs, and unnecessary animation.
- Use generous whitespace and a strong information hierarchy.
- Use colour to communicate meaning and hierarchy, not decoration.
- Design for quick scanning by users who may not be technically sophisticated.

3. RECOMMENDED COLOUR SYSTEM

Role	Hex	Usage
Primary Government Navy	#123B66	Brand, primary navigation, major headings, primary buttons
Secondary Blue	#1F5A91	Links, active states, progress, secondary actions
Accent Saffron	#E87524	Small highlights, selected indicators, Indian identity accent
Background	#F7F9FC	Main application background
Surface	#FFFFFF	Cards, panels, forms
Primary Text	#17202A	Main text and headings
Secondary Text	#5B6573	Descriptions, metadata, helper text
Success	#237A57	Completed/positive states
Warning	#B7791F	Attention states
Error	#B42318	Errors/critical states

Use navy and blue as the dominant colours. Use saffron sparingly. Do not turn the website into a tricolour theme.

4. TYPOGRAPHY

Use a highly readable sans-serif such as **Inter** or **Noto Sans**. Suggested hierarchy: Page title 28–32px; section heading 20–24px; card heading 16–18px; body 14–16px; labels 12–14px.

5. GLOBAL LAYOUT

Header

- Show iGOT Karmayogi branding on the left.
- Subtitle: Competency-driven Learning for a More Capable Civil Service.
- Navigation: Learn, Assess, Grow, Serve.
- Include search, notifications and learner profile.

- Add a very thin saffron accent line beneath the header.

Sidebar

- Dashboard
- My Learning
- Competency Profile
- Skill Gap Analysis
- Recommended Learning
- iGOT Courses
- Assessments
- Progress & Analytics
- Bottom: Help & Support, Profile & Settings
- Active navigation should use primary navy with a subtle highlighted background.

6. CORE SCREENS

Screen	Purpose	Main elements
Login / Signup	Secure entry	Login form, validation, clean branding
Learner Dashboard	Learning overview	Metrics, competency overview, recommendations, tasks
Competency Profile	Show competency state	Scores, progress bars/charts, strengths, gaps
Skill Gap Analysis	Explain gaps	Current, target, gap, priority, evidence, action
AI Recommendations	Personalized learning	Course cards, reason, competency mapping, CTA
iGOT Course Catalogue	Browse resources	Search, filters, course cards, metadata
Course Details	Course overview	Description, outcomes, competencies, progress, CTA
Assessment	Test knowledge	Question, options, progress, result
Reassessment	Measure improvement	Before/after score and competency comparison
Progress & Analytics	Track development	Completion, trends, competency improvement

7. DASHBOARD

Create a professional learner dashboard with the greeting **Good morning, [Learner Name]** and subtitle **Continue your competency journey and build capabilities for better public service.**

Show four summary cards: Enrolled Courses — 12; Overall Competency — 78%; Identified Skill Gaps — 4; Completed Courses — 3.

Add a Competency Overview with clean horizontal bars: Communication 82%, Leadership 68%, Digital Skills 91%, Decision Making 54%, Problem Solving 73%. Highlight the lowest competency subtly as a priority gap.

Add a Learning Journey donut chart showing 78% overall progress, with Completed, In Progress and Not Started categories.

8. AI RECOMMENDATIONS

Create a section titled **Recommended for You** with subtitle **Based on your competency gaps and role requirements**. Every recommendation must explain why it was recommended and which competency gap it addresses.

Effective Communication Skills
Communication • Intermediate
4 hours • Self-paced
Addresses your identified gap in communication and stakeholder management.
[View Course →]

Use a subtle saffron or blue accent to indicate personalization. Do not make recommendations look like advertisements.

9. IGOT COURSE CATALOGUE

- Search: Search courses, competencies...
- Filters: Competency, Difficulty, Duration, Category, Learning format.
- Course cards: title, description, competency tags, difficulty, duration, format, provider and View Course.
- Use realistic prototype/mock courses such as Effective Communication Skills, Strategic Decision Making, Digital Governance Essentials, Leadership for Public Service, Data-Driven Decision Making, and Citizen-Centric Service Delivery.

These are prototype/mock courses only. Do not hardcode course data into individual visual components.

10. COMPETENCY & GAP PAGES

Competency Profile should show overall competency, category scores, strengths and priority development areas using simple charts and progress bars.

Skill Gap Analysis should clearly show Current, Target, Gap, Severity/Priority, Evidence and Recommended Action.

Example: Decision Making — Current 54%, Target 75%, Gap 21 points, Priority High.

11. ASSESSMENT & REASSESSMENT

Build a clean quiz interface with assessment title, question number, progress, question, answer options, Previous, Next and Submit.

After submission show score, competencies assessed, incorrect areas and next steps.

Reassessment should show before/after competency scores, e.g. Decision Making: Before 54%, After 72%, Improvement +18 points.

12. PROGRESS & ANALYTICS

- Learning progress
- Courses completed
- Assessment scores
- Competency improvement
- Learning activity over time

Use simple, readable charts. Avoid decorative visualizations.

13. RESPONSIVE + ACCESSIBLE UI

- Support desktop, laptop, tablet and mobile.
- On mobile convert the sidebar to a drawer/navigation.
- Stack cards vertically and make charts responsive.
- Maintain readable typography and tap-friendly controls.
- Ensure good colour contrast, keyboard navigation, visible focus states, clear labels and meaningful error messages.
- Never rely on colour alone to communicate status.

14. REUSABLE COMPONENTS

```
Button
Card
Badge
ProgressBar
MetricCard
CourseCard
CompetencyCard
Sidebar
Header
SearchBar
Filter
Modal
Tabs
ChartContainer
EmptyState
LoadingState
ErrorState
```

Use reusable components rather than duplicating UI across pages.

15. DATA / API BOUNDARY

The frontend must not directly depend on hardcoded iGOT data. Create a clean service/data boundary.

```
courseService.searchCourses()
courseService.getCourse()
competencyService.getProfile()
recommendationService.getRecommendations()
progressService.getProgress()
```

For now these services can use mock data. The future structure should be: **Frontend** → **Application Service** → **iGOT Adapter** → **Mock iGOT API**. Do not scrape or attempt unauthorized access to the real iGOT platform.

16. IMPORTANT RULES

- Do not build a flashy AI-startup dashboard.
- Do not use rainbow cards.
- Do not overuse saffron.
- Do not overuse rounded corners.
- Do not use unnecessary animation.
- Do not hardcode iGOT data into page components.
- Keep the interface cohesive across all pages.
- Make the learner's competency gaps and recommended actions immediately understandable.
- Preserve a professional government/public-sector feel.

17. BUILD ORDER

```
1. Global layout + navigation
2. Design system + reusable components
3. Login / onboarding
4. Learner dashboard
5. Competency profile
6. Skill gap analysis
7. AI recommendations
8. iGOT catalogue + course details
9. Quiz + reassessment
10. Progress / analytics
11. Responsive refinement
12. Loading/error/empty states
```

18. FINAL INSTRUCTION

Build the iGOT Karmayogi learning-platform frontend as one cohesive product, not a collection of unrelated screens. Establish the design system first, then build the dashboard and remaining pages using the same system. Prioritize clarity, accessibility, responsive behavior and professional government UX. Keep iGOT data behind service/API interfaces so the Mock iGOT API can be connected later without redesigning the frontend.
